Good morning, and thank you for giving me the opportunity to introduce myself.

I am **Yash Saxena**, a final-year B.Tech Computer Science student at **COER University, Roorkee**, with a CGPA of **8.98**.

My main area of interest is **software development**, particularly **backend and full-stack development**. I primarily work with technologies like **JavaScript, React.js, Node.js, MongoDB, SQL, and C++**.

I have also completed an internship as an **SDE Intern at ArrayLog IT Solutions**, where I worked on an **Employee Management System**. This experience helped me understand how software is developed in a professional environment .

During my journey, I have built several full-stack projects. One of my major projects is **Trainify**, an **AI-powered Learning Management System**, where I implemented features such as **authentication, role-based access control, progress tracking, course management, and AI-based tools**. Working on these projects helped me understand how different modules of a full-stack application work together.

Apart from development, I have a strong focus on **problem-solving and Data Structures and Algorithms**. I have solved **several  DSA problems** on platforms such as Leetcode

I am now looking for an opportunity where I can **apply my technical skills, contribute to real-world projects, learn from experienced professionals, and continue growing as a software engineer**.

Thank you.
